DETAILED ACTION

This communication is in response to amendment received on 04/23/07.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 62-201957 in view of JP 09079865.

As to claim 15, JP 62-201957 (hereinafter JP'957) discloses a mold-type magnetic resistance element as detecting sensor including a magnetic sensor chip (2, fig. 1); a chip mounting member (1) on which the magnetic sensor chip (2) is mounted at a mounting position; an adhesive material (5, fig. 3) for bonding the magnetic sensor chip (2) to the chip mounting member (1) and an encapsulating material (4, fig. 1 and 2) for encapsulating the magnetic sensor chip (2) and a magnetic-field generating portion formed by magnetizing (6) a portion of the encapsulating material 5). JP'957 fails to show that the magnetic sensor chip comprises multiple magneto-resistance elements for forming MRE bridges, each of the multiple MREs having a detection axis, and wherein the magnetic-field generating portion is locally positioned such that a magnetic

Application/Control Number: 10/790,040

Art Unit: 2862

field generated by the magnetic-field generating portion is inclined for biasing at an angle of 45 degrees to respective detection axes of the MREs. JP 09079865 discloses a magnetic detecting sensor wherein the magnetic sensor chip comprises multiple magneto-resistance elements (11, 12, fig. 3) for forming MRE bridges, each of the multiple MREs (11, 12) having a detection axis, and wherein the magnetic-field generating portion (10) is locally positioned such that a magnetic field generated by the magnetic-field generating portion is inclined for biasing at an angle of 45 degrees to respective detection axes of the MREs (11, 12). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the device of JP'957 with the teachings JP '865 such that the magnetic field generating portion is inclined for biasing at an angle of 45 degrees to respective detection axes of the MREs would reduce the error in the signal generated by MREs, thereby increasing the efficiency of the device.

Response to Arguments

Applicant's arguments with respect to claim 15 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Reena Aurora whose telephone number is 571-272-2263. The examiner can normally be reached on Monday - Friday, 7:00 - 3:30.

Application/Control Number: 10/790,040
